GasGlow[®] Lighting

American Gas Lamp Works invented our patent-pending GasGlow[®] faux gas lamp to provide an LED light fixture that mimics precisely the look, color, and intensity of natural gas mantle lighting. GasGlow[®] faux gas lighting delivers the romantic illumination of gas mantles using exceptionally energy-efficient LED technology. Each GasGlow[®] mantle generates the same light output as a 50-watt incandescent electric bulb uses less than one-quarter of the energy. Even better, our GasGlow[®] technology is built into American Gas Lamp Works' standard gas mantle burner construction and thus preserves the historic, romantic look of Welsbach gas mantle lighting.

ADVANTAGES OF GASGLOW[®] LED ILLUMINATION TECHNOLOGY

- Maintenance free operation
- Delivers the historic, romantic look of Welsbach gas mantle lighting where electric lighting is preferable
- Uses less than a quarter of the energy of electric incandescent lighting
- Constructed using American Gas Lamp Works standard gas mantle components for an exact match with our gas mantle fixtures
- Easily adapted to existing electric lamps
