

WHAT TO KNOW When Considering Gas Lamps

Q: What type of gas do I need for a gas lamp?

Our open flame gas lamps can be fueled by natural gas only. Our mantle gas lamps can be fueled by natural gas or liquid propane. It is recommended that all gas lamps burn 24/7 unless equipped with automatic ignition. Please specify if you are using natural gas or liquid propane when ordering.

Q: What type of lamps do you offer?

All American Gas Lamp Works lamp models are available for use with natural gas or electric illumination. They can be configured as post-, pier-, and wall-mount configurations. We offer residential, mid-size, and estate-sized lamps with several customizable options, including decorative glass, finials, and finishes.

Q: How much does a gas lamp cost to operate?

In continuous use, an American Gas Lamp Works open flame gas lamp costs approximately \$10 per month to operate 24/7. Exact cost will depend on the cost of gas in your area and can be reduced with the use of automatic ignition.

Q: How do I turn my gas lamp on and off?

All of AGLW's gas lamps include a manual ignition valve in the collar of the fixture. The gas flow can be manually controlled at this point with a flat head tool (like a screwdriver). To turn the gas on, simply open the valve with a quarter turn of your tool, follow the lighting instructions for your type of burner, and ignite it with a long lighter. To turn the gas off, simply close the valve with a quarter turn of your tool in the opposite direction.

Q: Do you have a show room?

All of our products are customizable, available in hundreds of different unique configurations. Therefore, most of our fixtures are not on display in a showroom. However, we invite you to browse our collection of photos and videos in the Galleries section of our website!

Q: Who should I contact to install my gas lamp?

We recommend coordinating installation and service of gas lamps and lines with trained professional personnel. Your local plumber, professional gas lighting specialist, or HVAC a provider should be able to assist you with installation of a gas lamp.

Professional gas specialists can often be found at retail stores that offer gas products. For example, a hearth and grill, fireplace, or pool & patio shop that offer gas grills, gas fireplaces, gas logs, gas torches, etc. Oftentimes, these locations will have a service department with certified or experienced gas specialists who you may schedule an installation or service appointment with for your gas lamp.

Q: Where do you ship to? And from?

We arrange ground shipments within the United States and Canada, and our products proudly ship from just outside of Pittsburgh, Pennsylvania.

Q: Do you make custom lamps?

While our products are customizable, we do not offer completely custom services.

Q: Can you help me choose a lamp that's the right size and style for my project?

Absolutely! Please email any photos, videos and details of your project to us at sales@americangaslamp.com and our design team will be happy to recommend a size and style for you.

Q: How long will it take to receive my product once I place my order?

All of our products are made to order. Parts typically ship within 1-2 weeks. Lamps and posts typically ship within 2-4 weeks. Please contact us directly at 724-274-7131 to confirm the current estimated production time for your order.
